

## SGET 700: Tools for the Development of Instruction

Name of Reviewer: \_\_Alanna Seid\_\_\_\_\_

Name of Site Author: \_\_Nicole Stranix\_\_\_\_\_

1. Review the site's page titles. Does the site use two part page titles? Are the titles in Standard English form (complete words, spaces between words, etc.) Is the first part of the title the same on all pages? Is the second part unique to each page, and does it adequately identify the page? Is the capitalization, punctuation, and spacing of titles consistent? Below, list the page names of pages with titles that need correction.

Yes, all the page titles are in standard english form. Each page has a specific title relevant to the information/assignment on each page. Spelling and grammar is correct for all page titles throughout the website.

2. Check the site's links. Are all links functioning? Do all graphic links include appropriate alternative text? Do all graphic links include a nearby text link that links to the same resource? List the page, link, and problem of any link that needs to be edited.

Yes, every link on every page of Nicole's site works. All links are labeled correctly, and take you to where they should, whether it is a video, PDF or another website with additional information.

3. Check the graphics included in this site. Do they all load correctly? Do they all included appropriate alternative text in Standard English convention? List the page, graphic name, and problem of any graphic needing correction.

Yes, all Nicole's' graphics load probably and are relevant to the page content. I don't think the program Nicole used for pictures has an option for alternate text for pictures, or I just don't know how to view it. I know I added alt text on my Google Website, but I am not sure how anyone can see it.

4. Review the documentation on every page of this site. The home page must include the name of the author, the date of last update, an email link, and an appropriate disclaimer. Please list the name of each page with a documentation error and specify the type of error.

I don't see any pages with errors. I see you are still working on your Works Cited page. Once that is complete, the website is completely finished.

5. Check for general text edits. When developing such a large project, it is easy to make a few spelling, grammatical, or capitalization errors. Help your buddy by identifying any

such errors. Remember to include the page name and provide specifics to help them find and correct the error. Also identify any passages which you find at all confusing because of wording.

Nicole's text and font format is consistent throughout her website. It is very easy to read and grabs the attention of the online user. All her text looks correct, without any grammar or spelling mistakes.

6. Overall site comments. Include any overall suggestions for the site and any suggestions for future development.

Your website looks great, I'm excited to hear your presentation. I love all of the videos you have added for your students. Don't forget to add to your Works Cited page! :)
